Please add new claims 35, et seq. as follows:

1 35. (NEW): A method for information handling within a document created using a first ap-  
2 plication program comprising the steps of:

3 entering a first information in the first application program;

4 marking without user intervention the first information to alert the user that the first  
5 information can be utilized in a second application program; and

6 responding to a user selection by inserting a second information into the document,  
7 the second information associated with the first information from a second application pro-  
8 gram.

1 36. (NEW): The method of claim 35 wherein the user selection further comprises an activa-  
2 tion of a device selected from a group consisting of a touch screen, a keyboard button, a  
3 screen button, an icon, a menu, and a voice command device.

1 37. (NEW): The method of claim 35, wherein the step of inserting the second information  
2 into the document further comprises the steps of:

3 initializing the second application program;

4 searching, using the second application program, for the second information associ-  
5 ated with the first information; and

6 retrieving the second information.

1 38. (NEW): The method of claim 37, wherein when the second application program includes  
2 second information associated with the first information, performing the further step of dis-  
3 playing the second information.

1 39. (NEW): The method of claim 38, further comprising the step of completing at least one  
2 of the first and second information in the document.

1 40. (NEW): The method of claim 35, wherein the first information comprises a name.

1 41. (NEW): A computer readable medium, including program instructions related to infor-  
2 mation handling within a document created using a first application program and for per-  
3 forming the steps of:

4 entering a first information in the first application program;

5 marking without user intervention the first information to alert the user that the first  
6 information can be utilized in a second application program; and

7 responding to a user selection by inserting a second information into the document,  
8 the second information associated with the first information from a second application pro-  
9 gram.

1 42. (NEW): The computer readable medium of claim 41, wherein the user selection further  
2 comprises an activation of a device selected from a group consisting of a touch screen, a  
3 keyboard button, a screen button, an icon, a menu, and a voice command device.

1 43. (NEW): The computer readable medium of claim 41, wherein the step of inserting the  
2 second information into the document further comprises the steps of:

3 initializing the second application program;

4 searching, using the second application program, for the second information associ-  
5 ated with the first information; and

6 retrieving the second information.

1 44. (NEW): The computer readable medium of claim 43, wherein when the second applica-  
2 tion program includes second information associated with the first information, performing  
3 the further step of displaying the second information.

1 45. (NEW): The computer readable medium of claim 44, further comprising the step of  
2 completing at least one of the first and second information in the document.

1 46. (NEW): The computer readable medium of claim 41, wherein the first information com-  
2 prises a name.

1 47. (NEW): A computer system related to information handling within a document created  
2 using a first application program, comprising:

3 means for entering a first information in the first application program;

4 means for marking without user intervention the first information to alert the user  
5 that the first information can be utilized in a second application program; and

6 means for responding to a user selection by inserting a second information into the  
7 document, the second information associated with the first information from a second appli-  
8 cation program.

1 48. (NEW): The computer system of claim 47, wherein the means for the user selection fur-  
2 ther comprises:

3 means for an activation of a device selected from a group consisting of a touch  
4 screen, a keyboard button, a screen button, an icon, a menu, and a voice command device.

1 49. (NEW): The computer system of claim 47, wherein the means for inserting the second  
2 information into the document further comprises:

3 means for initializing the second application program;

4 means for searching, using the second application program, for the second informa-  
5 tion associated with the first information; and

6 means for retrieving the second information.

1 50. (NEW): The computer system of claim 49, wherein when the second application pro-  
2 gram includes second information associated with the first information, and comprising  
3 means for performing the further step of displaying the second information.

1 51. (NEW): The computer system of claim 50, further comprising means for completing at  
2 least one of the first and second information in the document.

1 52. (NEW): The computer system of claim 47, wherein the first information comprises a  
2 name.

1 53. (NEW): A method for information handling within a document created by a first applica-  
2 tion program comprising the steps of:

3 entering a first information in the first application program;

4 marking without user intervention the first information to alert the user that the first  
5 information can be utilized in a second application program; and

6 responding to a user selection by performing an operation related to a second infor-  
7 mation, the second information associated with the first information from the second applica-  
8 tion program.

1 54. (NEW): The method of claim 53 wherein the operation comprises displaying the second  
2 information.

1 55. (NEW): The method of claim 53, wherein the first information is a name, and the opera-  
2 tion performed is selected from a group consisting of an electronic mail, a telex, a facsimile  
3 or a letter addressed to the name indicated by the first information.

1 56. (NEW): The method of claim 53, wherein the operation performed is entering additional  
2 data into a database.

1 57. (NEW): The method of claim 56, wherein the additional data is entered by a user.

1 58. (NEW): The method of claim 56, wherein the additional data is located within the docu-  
2 ment.

1 59. (NEW): A computer readable medium, including program instructions related to informa-  
2 tion handling within a document created by a first application program and for performing  
3 the steps of:

4 entering a first information in the first application program;

5 marking without user intervention the first information to alert the user that the first  
6 information can be utilized in a second application program; and

7 responding to a user selection by performing an operation related to a second infor-  
8 mation, the second information associated with the first information from the second applica-  
9 tion program.

1 60. (NEW): The computer readable medium of claim 59, wherein the operation comprises  
2 displaying the second information.

1 61. (NEW): The computer readable medium of claim 59, wherein the first information is a  
2 name, and the operation performed is selected from a group consisting of an electronic mail,  
3 a telex, a facsimile or a letter addressed to the name indicated by the first information.

1 62. (NEW): The computer readable medium of claim 59, wherein the operation performed is  
2 entering additional data into a database.

1 63. (NEW): The computer readable medium of claim 62, wherein the additional data is en-  
2 tered by a user.

1 64. (NEW): The computer readable medium of claim 62, wherein the additional data is lo-  
2 cated within the document.

1 65. (NEW): A computer system related to information handling within a document created  
2 by a first application program, comprising:

3 means for entering a first information in the first application program;

4 means for marking without user intervention the first information to alert the user that  
5 the first information can be utilized in a second application program; and

6 means for responding to a user selection by performing an operation related to a sec-  
7 ond information, the second information associated with the first information from the sec-  
8 ond application program.

1 66. (NEW): The computer system of claim 65 wherein the operation comprises displaying  
2 the second information.

1 67. (NEW): The computer system of claim 65, wherein the first information is a name, and  
2 the operation performed is selected from a group consisting of an electronic mail, a telex, a  
3 facsimile or a letter addressed to the name indicated by the first information.

1 68. (NEW): The computer system of claim 65, wherein the operation performed is entering  
2 additional data into a database.

1 69. (NEW): The computer system of claim 68, wherein the additional data is entered by a  
2 user.

1 70. (NEW): A method for information handling within a document operated on by a first  
2 application program, the document containing first information entered by a user, the method  
3 comprising the steps of:

4 identifying without user intervention the first information that can be utilized in a  
5 second application program; and

6 responding to a user selection by inserting a second information into the document,  
7 the second information associated with the first information from a second application pro-  
8 gram.

9 responding to a user selection by inserting into the document a second information re-  
10 trieved from a second application program through use of said first information

1 71. (NEW): The method of claim 70, wherein the user selection further comprises an activa-  
2 tion of a device selected from a group consisting of a touch screen, a keyboard button, a  
3 screen button, an icon, a menu, and a voice command device.

1 72. (NEW): The method of claim 70, wherein the step of inserting the second information  
2 into the document further comprises the steps of:

3       initializing the second application program;  
4       searching, using the second application program, for the second information associ-  
5       ated with the first information; and  
6       retrieving the second information.

1 73. (NEW): The method of claim 72 wherein the step of inserting the second information in  
2 to the document further comprises adding the second information to the first information in  
3 the document.

1 74. (NEW): The method of claim 73, wherein when the second application program includes  
2 second information associated with the first information, performing the further step of dis-  
3 playing the second information.

1 75. (NEW): The method of claim 73, further comprising the step of completing at least one  
2 of the search and second information in the document.

1 76. (NEW): The method of claim 70, wherein the search information comprises a name.

1 77. (NEW): A computer readable medium, including program instructions related to informa-  
2 tion handling within a document operated on by a first application program, the document  
3 containing first information entered by a user, and for performing the steps of:

4       identifying without user intervention the first information that can be utilized in a  
5 second application program; and

6       responding to a user selection by inserting a second information into the document,  
7 the second information associated with the first information from a second application pro-  
8 gram.

9           responding to a user selection by inserting into the document a second information re-  
10       trieved from a second application program through use of said first information

1       78. (NEW): The computer readable medium of claim 77, wherein the user selection further  
2       comprises an activation of a device selected from a group consisting of a touch screen, a key-  
3       board button, a screen button, an icon, a menu, and a voice command device.

1       79. (NEW): The computer readable medium of claim 77, wherein the step of inserting the  
2       second information into the document further comprises the steps of:  
3           initializing the second application program;  
4           searching, using the second application program, for the second information associ-  
5       ated with the first information; and  
6           retrieving the second information.

1       80. (NEW): The method of claim 79 wherein the step of inserting the second information in  
2       to the document further comprises adding the second information to the first information in  
3       the document.

1       81: (NEW): The computer readable medium of claim 80, wherein when the second applica-  
2       tion program includes second information associated with the first information, performing  
3       the further step of displaying the second information.

1       82. (NEW): The computer readable medium of claim 80, further comprising the step of com-  
2       pleting at least one of the search and second information in the document.

1       83. (NEW): The computer readable medium of claim 77, wherein the search information  
2       comprises a name.

1 84. (NEW): A computer system related to information handling within a document operated  
2 on by a first application program, the document containing first information entered by a  
3 user, comprising:

4 means for identifying without user intervention the first information that can be util-  
5 ized in a second application program; and

6 means for responding to a user selection by inserting a second information into the  
7 document, the second information associated with the first information from a second appli-  
8 cation program.

9 means for responding to a user selection by inserting into the document a second in-  
10 formation retrieved from a second application program through use of said first information.

1 85. (NEW): The computer system of claim 84, wherein the means for user selection further  
2 comprises means for an activation of a device selected from a group consisting of a touch  
3 screen, a keyboard button, a screen button, an icon, a menu, and a voice command device.

1 86. (NEW): The computer system of claim 84, wherein the means for inserting the second  
2 information into the document further comprises:

3 means for initializing the second application program;

4 means for searching, using the second application program, for the second informa-  
5 tion associated with the first information; and

6 means for retrieving the second information.

1 87. (NEW): The computer system of claim 84 wherein the means for inserting the second  
2 information in to the document further comprises means for adding the second information to  
3 the first information in the document.

1 88. (NEW): The computer system of claim 84, wherein when the second application program  
2 includes second information associated with the first information, and comprising means for  
3 performing the further step of displaying the second information.

1 89. (NEW): The computer system of claim 88, further comprising means for completing at  
2 least one of the search and second information in the document.

1 90. (NEW): The computer system of claim 84, wherein the search information comprises a  
2 name.

1 91. (NEW): A method for information handling within a document operated on by a first ap-  
2 plication program, the document containing first information entered by a user, the method  
3 comprising the steps of:

4 identifying without user intervention the first information that can be utilized in a  
5 second application program; and

6 responding to a user selection by performing an operation related to a second in-  
7 formation, the second information associated with the first information from the second ap-  
8 plication program.

1 92. (NEW): The method of claim 91 wherein the operation comprises displaying the second  
2 information.

1 93. (NEW): The method of claim 91, wherein the search information is a name, and the op-  
2 eration performed is selected from a group consisting of generating an electronic mail, a  
3 telex, a facsimile or a letter addressed to the name indicated by the search information.

1 94. (NEW): The method of claim 91, wherein the operation performed is entering additional  
2 data into a database

1 95. (NEW): The method of claim 94, wherein the additional data is entered by a user.

1 96. (NEW): The method of claim 94, wherein the additional data is located within the docu-  
2 ment.

1 97. (NEW): A computer readable medium, including program instructions related to informa-  
2 tion handling within a document operated on by a first application program, the document  
3 containing first information entered by a user, and for performing the steps of:

4 identifying without user intervention the first information that can be utilized in a  
5 second application program; and

6 responding to a user selection by performing an operation related to a second infor-  
7 mation, the second information associated with the first information from the second applica-  
8 tion program.

1 98. (NEW): The computer readable medium of claim 97 wherein the operation comprises  
2 displaying the second information.

1 99. (NEW): The computer readable media of claim 97, wherein the first information is a  
2 name, and the operation performed is selected from a group consisting of generating an elec-  
3 tronic mail, a telex, a facsimile or a letter addressed to the name indicated by the first infor-  
4 mation.

1 100. (NEW): The computer readable media of claim 97, wherein the operation performed is  
2 entering additional data into a database

1 101. (NEW): The computer readable media of claim 100, wherein the additional data is en-  
2 tered by a user.

1 102. (NEW): The computer readable media of claim 100, wherein the additional data is lo-  
2 cated within the document.

1 103. (NEW): A computer system related to information handling within a document operated  
2 on by a first application program, the document containing first information entered by a  
3 user, comprising:

4 means for identifying without user intervention the first information that can be util-  
5 ized in a second application program; and

6 means for responding to a user selection by performing an operation related to a sec-  
7 ond information, the second information associated with the first information from the sec-  
8 ond application program.

1 104. (NEW): The computer system of claim 103 wherein the operation comprises displaying  
2 the second information.

1 105. (NEW): The computer system of claim 103, wherein the first information is a name, and  
2 the operation performed is selected from a group consisting of generating an electronic mail,  
3 a telex, a facsimile or a letter addressed to the name indicated by the first information.

1 106. (NEW): The computer system of claim 103, wherein the operation performed is entering  
2 additional data into a database

1 107. (NEW): The computer system of claim 106, wherein the additional data is entered by a  
2 user.

1 108. (NEW): The computer system of claim 106, wherein the additional data is located within  
2 the document.
